Merchant Payment Center

Merchants who want to accept and authorize credit card payments in their online store have the option of signing up for Merchant Payment Center. Merchant Payment Center consolidates and automates the tasks of establishing a merchant bank account and accessing an Internet payment gateway for transaction processing. Merchant Payment Center's merchant account services are provided through NetStar Technologies' partnership with Bank One.* Merchant Payment Center included with **eCart 4000** plan type.

When you sign up for a plan, NetStar Technologies will send you a CD which includes the PGP encryption software for the client machine. For International customers, **Mercantec has received the export license** for their PGP encryption and we are pleased to be the first company to offer their product internationally. Due to U.S. export restrictions on encryption technology, we are not permitted to sell this product to people in the following countries: Afghanistan, Cuba, Iran, Iraq, Libya, North Korea, Pakistan, Sudan, Syria. If you are a customer in one of these countries, we will shortly be offering Open Market's ShopSite commerce product which does not have the PGP encryption. You will be able to use this product to build a commerce website as soon as it is available.

The following **add-on modules** are available on the Mercantec SoftCart Ecommerce plans and can be requested by contacting NetStar Technologies Technical Support Department directly:

- **Clear Commerce Module:** Clear Commerce is a turn key real-time credit card processing application. With one simple application, your online store is automatically configured and can begin to take online transactions. This module is installed with all **EC 3** plans and is optional for all eCart 1000 and eCart 2000 Plans.
- **Drop Ship Module:** If your company has many divisions in different locations, this module will allow for the order to go to the appropriate location.
- **QuickBooks Module:** Gives the ability to use Mercantec with the Quickbooks program. This gives you the ability to track the sales and revenue through this well known program.
